

# No-Code AI Agents & Automation™

A 2-day hands-on workshop. Use agentic frameworks, design patterns, and modern tools to build production-ready AI agents — without writing code.

**2 Days**

LIVE WORKSHOP

**2 Agents**

BUILT & DEPLOYED

**n8n + Claude**

YOUR BUILD STACK

**2,800+**

PROFESSIONALS TRAINED

# Lead the shift to agentic systems.

LLMs gave us features. Agents give us systems that reason, decide, and act. In this workshop you'll learn the architectures, design patterns, and tools to build them — and you'll leave with two real agents running in production.

## 100%

Hands-on build. Every concept is taught by shipping.

## 0 lines

Of code required. Agentic architecture, no programming.

## ★ 4.94

SAI Partner Feedback Score. Highest-rated SAFe Silver Partner.

WHAT YOU'LL LEARN

# From single prompts to **autonomous systems.**

## Agent Fundamentals

What separates an AI agent from a chatbot or LLM feature. The core principles that drive real business value.

## Agentic Design Patterns

Prompt chaining, routing, reflection, and tool use. Reusable patterns to translate any workflow into a reliable agent.

## Memory & Context

Give your agents persistent memory, conversation state, and retrieval-augmented context for grounded decisions.

## Tool Use & Integrations

Connect agents to your real stack — CRMs, email, Sheets, Slack, internal APIs — so they can act, not just answer.

## Human-in-the-Loop

Approval gates, confidence thresholds, and review steps. Ship autonomous agents you can actually trust.

## Production Deployment

Monitoring, error handling, cost control, and rollback. Move agents from prototype to running 24/7.

## WHAT YOU'LL BUILD

# Two real agents. Yours to deploy on Monday.

Forget toy demos. You'll architect, build, and ship two production-grade agents using your own data and tools.

### AGENT 01

## The Lead Qualification & Outreach Agent

An autonomous agent that ingests inbound leads, enriches them with research, scores them against your ICP, and drafts personalized outreach — with human approval before send.

- Multi-step reasoning with Claude
- External enrichment via tool use
- Memory of past interactions
- Approval gate before sending

### AGENT 02

## The Document Intelligence Agent

An agent that monitors an inbox or folder, classifies incoming documents, extracts structured data, routes them to the right system, and flags exceptions for review.

- Triggered workflows in n8n
- Claude-powered extraction & reasoning
- Structured output to your systems
- Exception routing for edge cases

# Six modules. Two days. Built around shipping.

Every module pairs a core concept with a hands-on build block.

## MODULE 1

### The Agentic Mindset

Move past "prompt engineering" into systems thinking. What an agent really is, when to use one, and how to scope it.

## MODULE 2

### Design Patterns & Architecture

The core patterns — prompt chaining, routing, reflection, tool use, multi-step planning. When to reach for each.

## MODULE 3

### Building in n8n with Claude

Master the build surface. Triggers, nodes, branching, error handling, and integrating Claude as the reasoning engine.

## MODULE 4

### Memory, Tools & Integrations

Give agents persistent context and the ability to act. Connect to your real systems via APIs and integrations.

## MODULE 5

### Approvals, Guardrails & Trust

Human-in-the-loop patterns, confidence thresholds, and safety checks. Production-grade governance for agents.

## MODULE 6

### Ship to Production

Deploy your agents live, set up monitoring and alerts, control cost, and design a rollback plan.

YOUR BUILD STACK

# Tools that turn ideas into shipped agents.

We don't teach 12 tools you'll never use. We pick the modern, durable stack and go deep — so you leave fluent, not overwhelmed.

## n8n

Visual agent orchestration

## Claude

Reasoning & tool use

## Webhooks

Triggers & events

## APIs

Connect any system

## Memory

Persistent context

## Approvals

Human-in-the-loop

WHO THIS IS FOR

# Builders who want to **ship, not just learn.**

**Operations & process leaders** who want to automate the work, not just diagram it.

---

**Marketing & sales professionals** ready to ship AI-powered outreach and lead workflows.

---

**Customer success teams** automating support triage, follow-up, and account workflows.

---

**Founders & solo builders** who want production AI agents without hiring engineers.

---

**Anyone non-technical** who's tired of reading about AI and wants to build with it.

## What's included

- ✓ 2-day live, instructor-led workshop
- ✓ Both agents you build, yours to keep
- ✓ Lifetime access to materials & recordings
- ✓ n8n + Claude reference templates
- ✓ No-Code AI Agents & Automation™ certification
- ✓ Flexible payment plans available

2026 COHORTS OPEN NOW

# Build agents. Ship products.

Two days. Two real agents. A new way of working with AI — without writing a line of code.
